bataa.

Learn by doing.

bataa.app is your AI mentor that learns from real tutorials and can control your computer with you.

It sits on your screen as a friendly mascot, shows you exactly where to click, explains what everything does and why it matters, answers your questions, and guides you step by step while you actually practice the skill.

Mobile practice · Desktop guidance · AI when the question appears

Learning support disappears when the learner is ready to act

The hardest moment often comes after the video ends.

“I know what I want to learn. I just do not know what to click next.”

The learner is alone when the question appears: late at night, between classes, or inside unfamiliar software.

We heard the same friction in three moments

Qualitative discovery at Horus University. Synthesized from conversations, not verbatim quotes.

OBSERVED HORUS UNIVERSITY

“I can’t ask an instructor at 2 a.m.”

PARAPHRASED STUDENT SIGNAL

The question arrives after the lesson.

Three moments, one pattern

1 **02:00 AM**

Support stops when the question starts.

2 **TOO BASIC TO ASK**

Anxiety turns a small blocker into a stall.

3 **TOO EXPENSIVE / TOO CROWDED**

Existing options miss the moment of practice.

PRODUCT IMPLICATION **Make the next step available, private, and easy to try.**

Evidence status: observed. Horus University conversations.

The missing layer is contextual guidance

Bataa helps at the exact moment the learner has to make a move.

CONTENT ONLY

Watch → pause → search → stall

The learner has to translate theory into the next action alone.

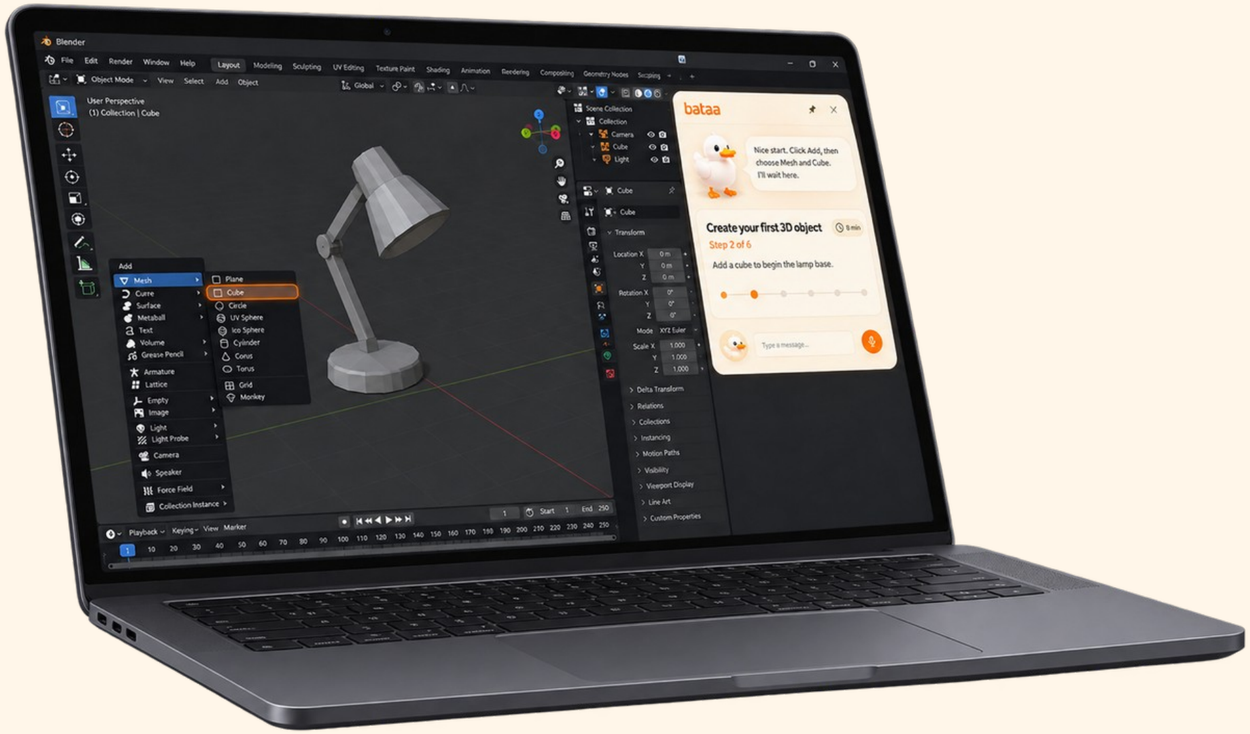

BATAA

Try → get feedback → keep moving

The next step appears beside the work, in plain English.

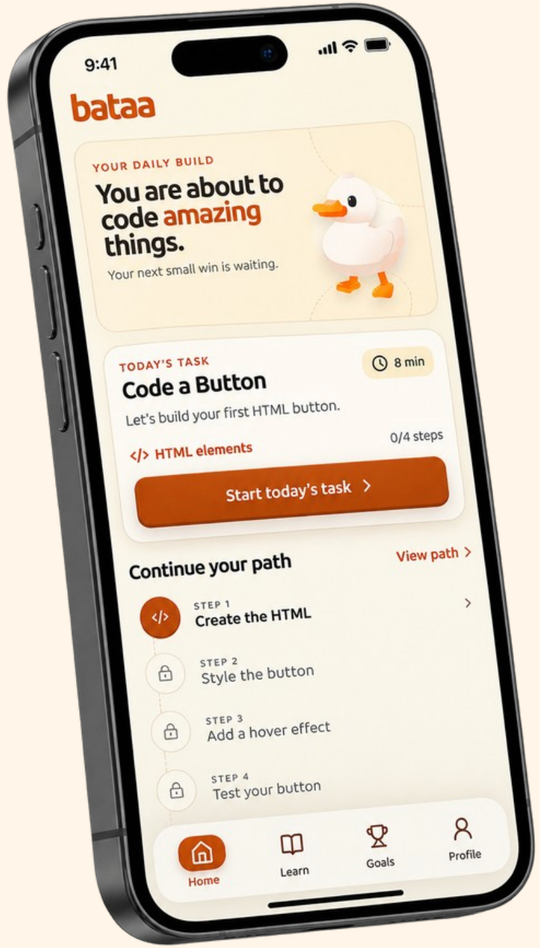

One product, two moments

The same learning loop follows the learner from a spare minute to the tool where the work happens.

DESKTOP

Guide inside the tool

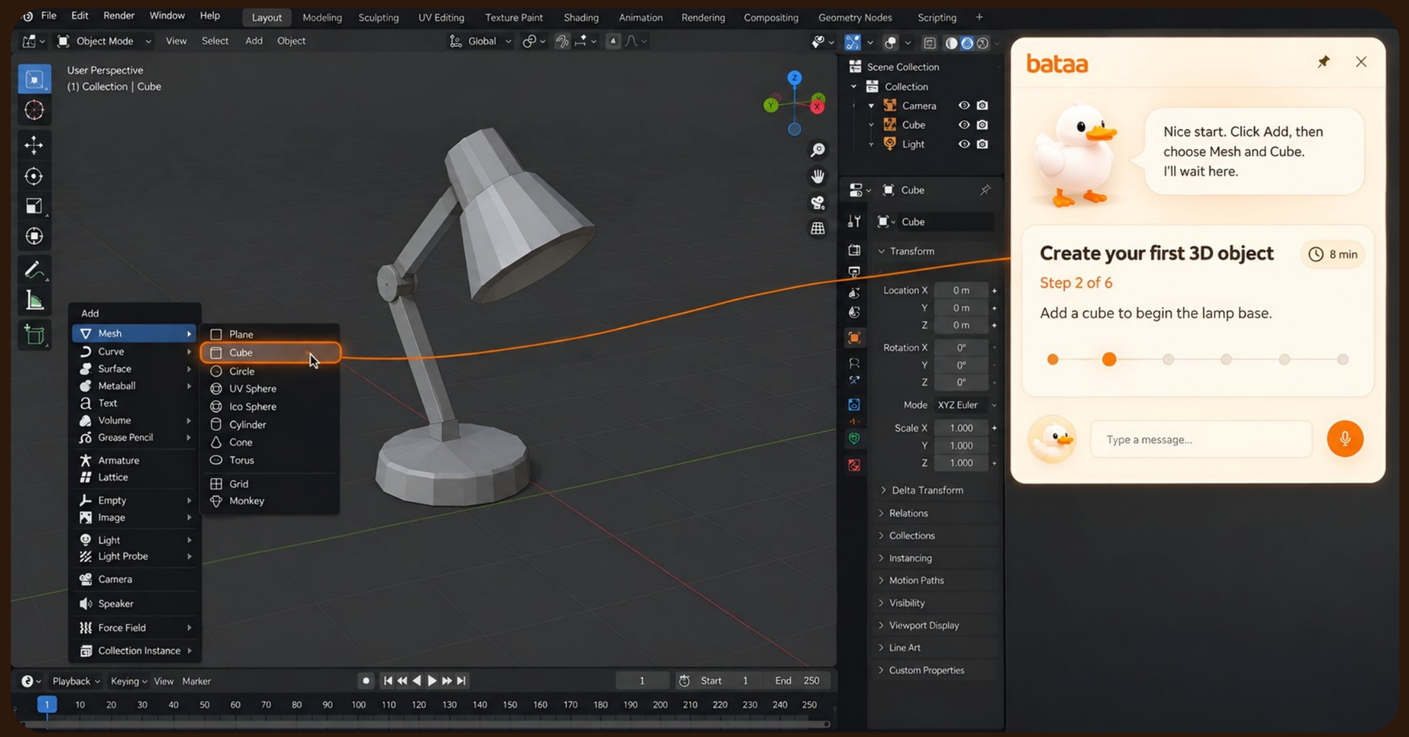

MOBILE

Keep momentum anywhere

Short daily tasks make progress possible in transit, between classes, or at home.

Desktop guidance meets the learner where work happens

For 3D, code, and other tools, Bataa can point to the next action instead of describing it from a distance.

01 Notice
Understand what the learner is trying to do

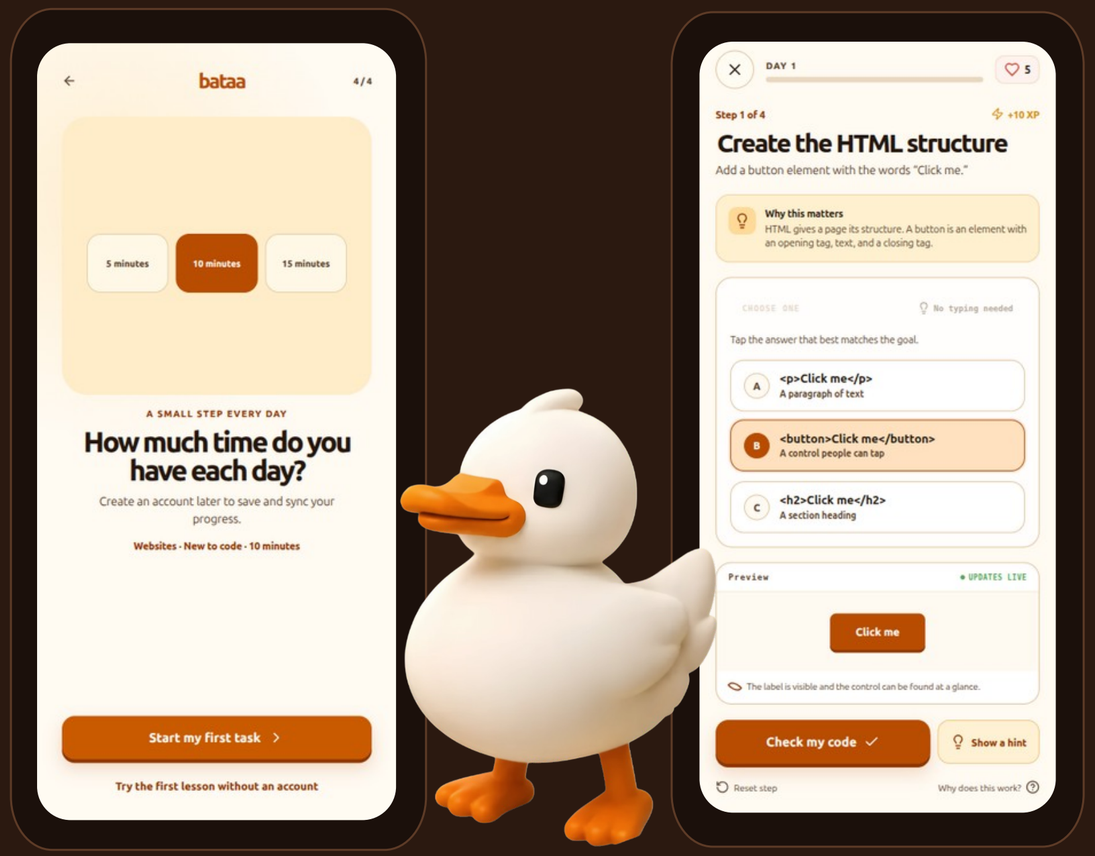

02 Point
Highlight the exact control or line to inspect

03 Try
Let the learner perform the action and see the result

Desktop product visual · guided-project-ai.webp and ai-assisted-coding.webp

Mobile turns spare minutes into practice

A daily task can fit into the time a learner already has.

1 **8–10 min**

A small session with a clear finish line

2 **User friendly**

The first days use three-choice recognition

3 **One real skill**

Every step maps to a usable web concept

Demonstrated · beginner-friendly lesson flow

A skill compounds one small day at a time

Illustrative 3D-modeling journey: the learner starts with a gesture, then builds a real artifact.

The product promise is a path, not a single lesson.

1

DAY 1

Find the tool

Recognize the viewport, select an object, make one change.

2

DAY 7

Shape a scene

Combine small actions into a simple modeled composition.

3

DAY 30

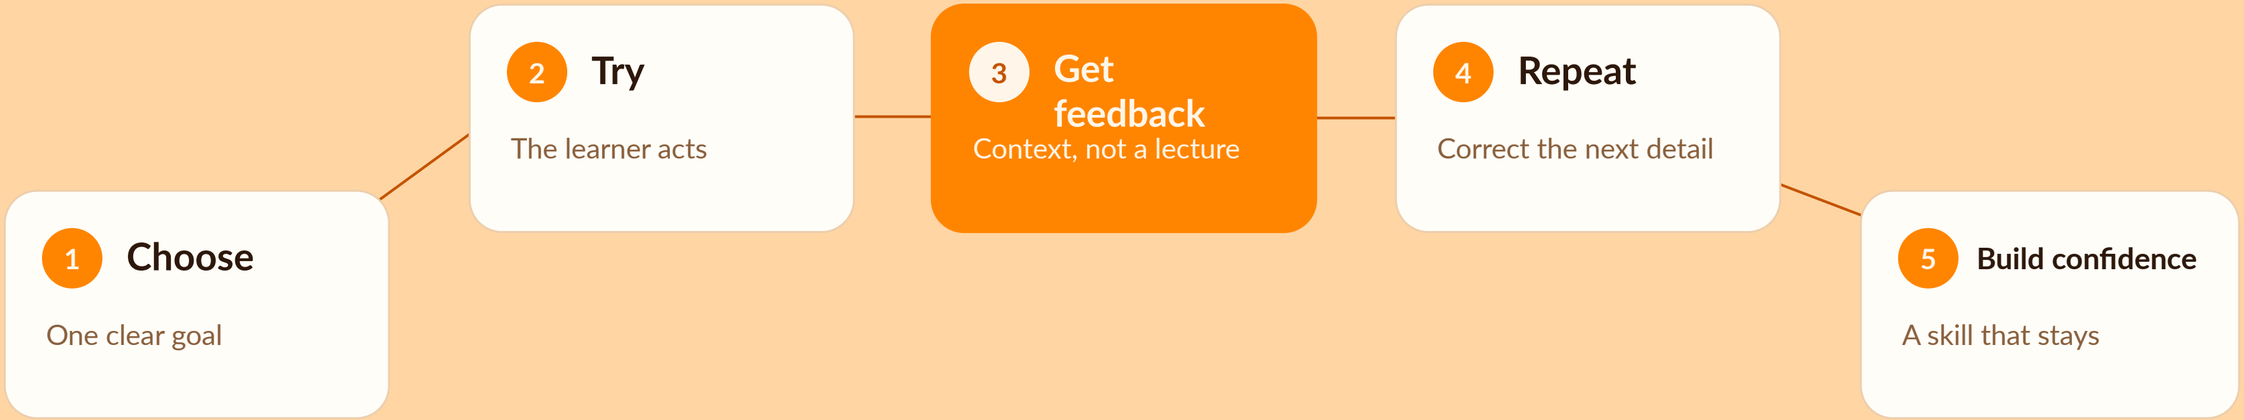

Finish an artifact

Use the same guided loop to complete a portfolio-ready piece.

Product narrative · example journey, not a measured outcome

Bataa closes the gap between attempt and understanding

Each turn makes the next turn easier.

THE LOOP The product keeps the learner moving without taking the work away from them.

Editable diagram · product hypothesis to validate in pilot

Bataa sits between content and the moment of action

A positioning hypothesis, not a claim that competitors lack AI.

Bataa combines daily practice with help inside the work.

Start with one clear revenue engine

Paid learning first. Optional AI usage and platform licensing expand the model later.

LAUNCH PRIORITY

Course purchase

Learners pay for a structured path that turns practice into a finished skill.

OPTIONAL

AI tokens

Extra attempts, deeper explanations, or advanced model usage.

LATER

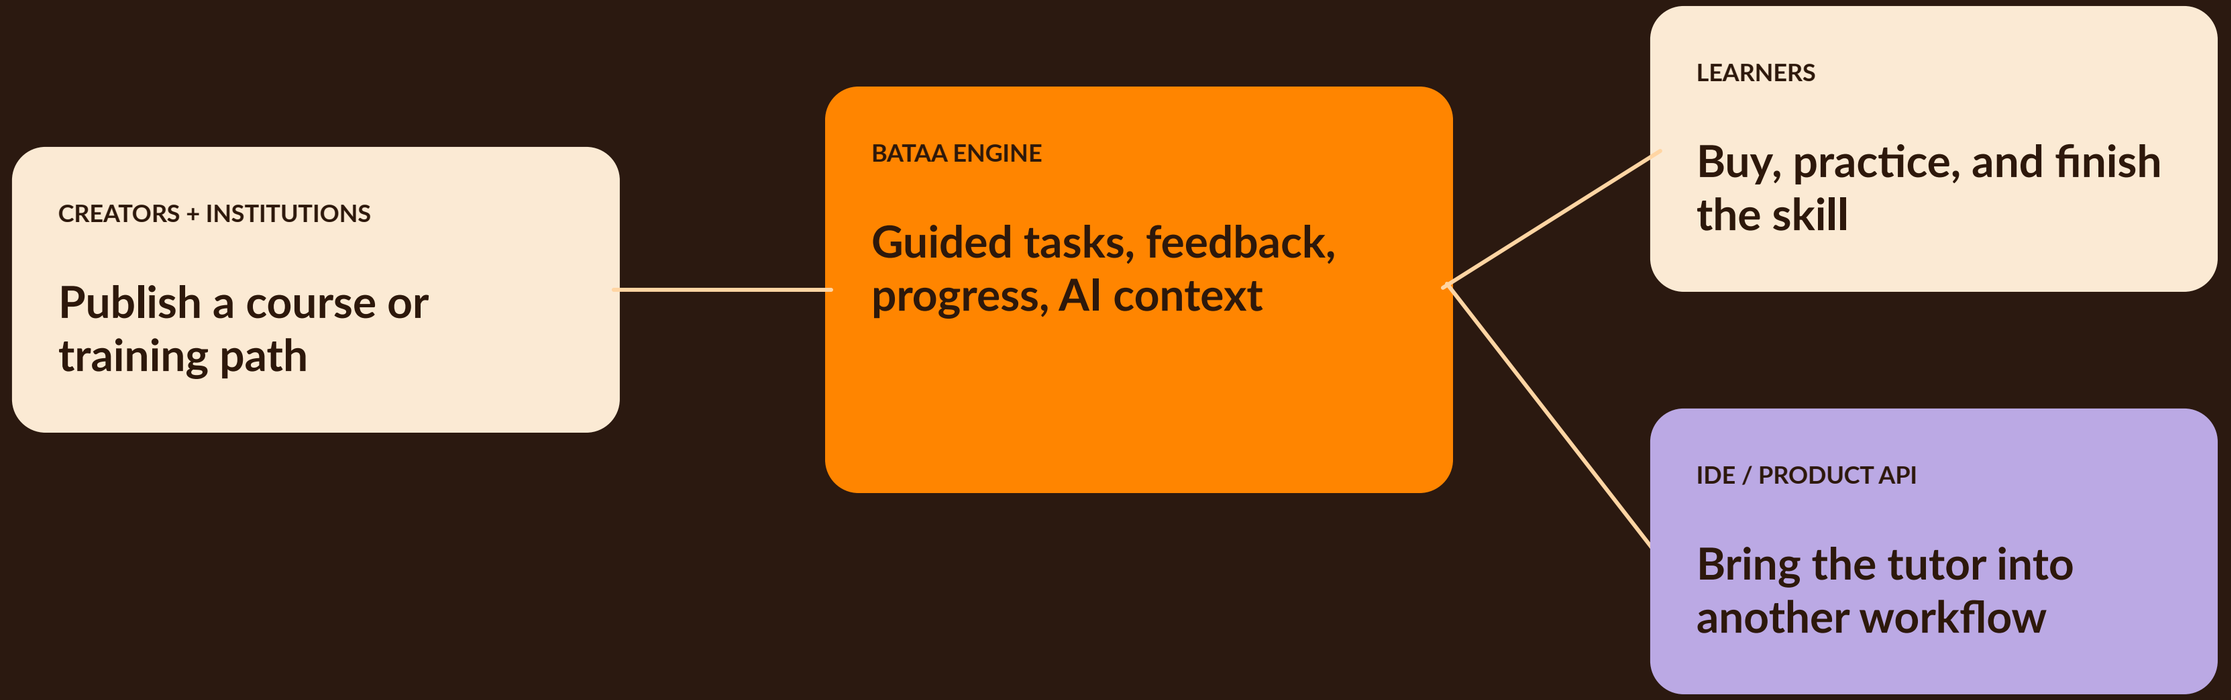

Platform fees

Commission from creator and institution courses.

Keep the first story simple: one learner pays for one useful outcome.

The same learning engine can serve creators and institutions

Bataa can become the infrastructure behind guided practice, not only a destination app.

PLANNED EXPANSION Commission on course sales plus API licensing for organizations and tools.

The team built the core surfaces

The product is split across the places where the learner meets Bataa.

1

Abdelrahman Mohsen

DESKTOP APP

Builds the guided workspace where the AI can meet the learner inside real software.

2

Yousef Mohamed

Web/Mobile app developer

Builds the daily lesson loop for small, approachable practice sessions.

3

Mostafa Kamal

Web app assistant developer

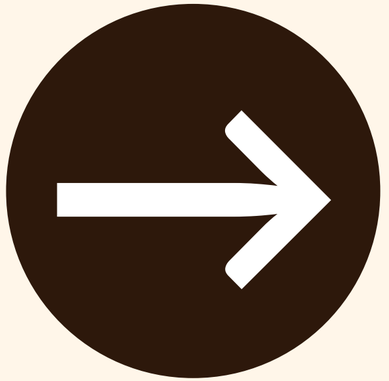

Shapes the public story, visual identity, and first touchpoint for Bataa.

Team roles · supplied in the Bataa brief

The next milestone is a real pilot.

Prove that one doable action can become a habit and a finished skill.

01	**Beginner mobile path**	Ship the first week of simple daily tasks
02	**Desktop agent pilot**	Guide one real workflow with safe user control
03	**Partner pilots**	Test a creator course and an institutional path

Bataa gives every learner a next step.

▶ VIDEO DEMO & FAQ

See Bataa in action — all questions answered fast.

We recorded an official video walkthrough demonstrating the live product experience and directly answering every competition judge question in minutes.
